

Add Login Protection in Web Apps

Open last project (4. Routing URL in React JS Web Apps)

Open VS code Terminal

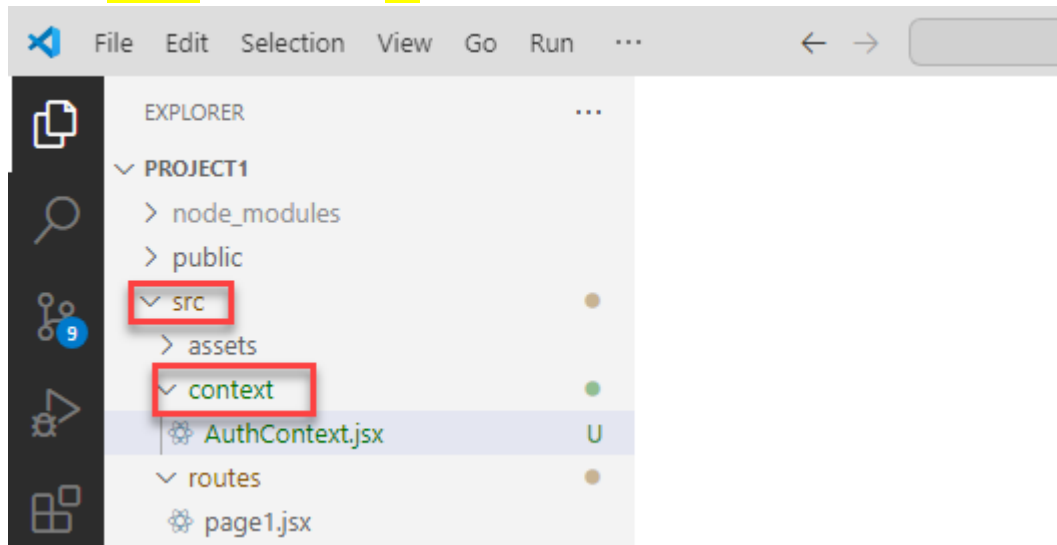

Install **axios** to create HTTP request in our apps:

npm install axios

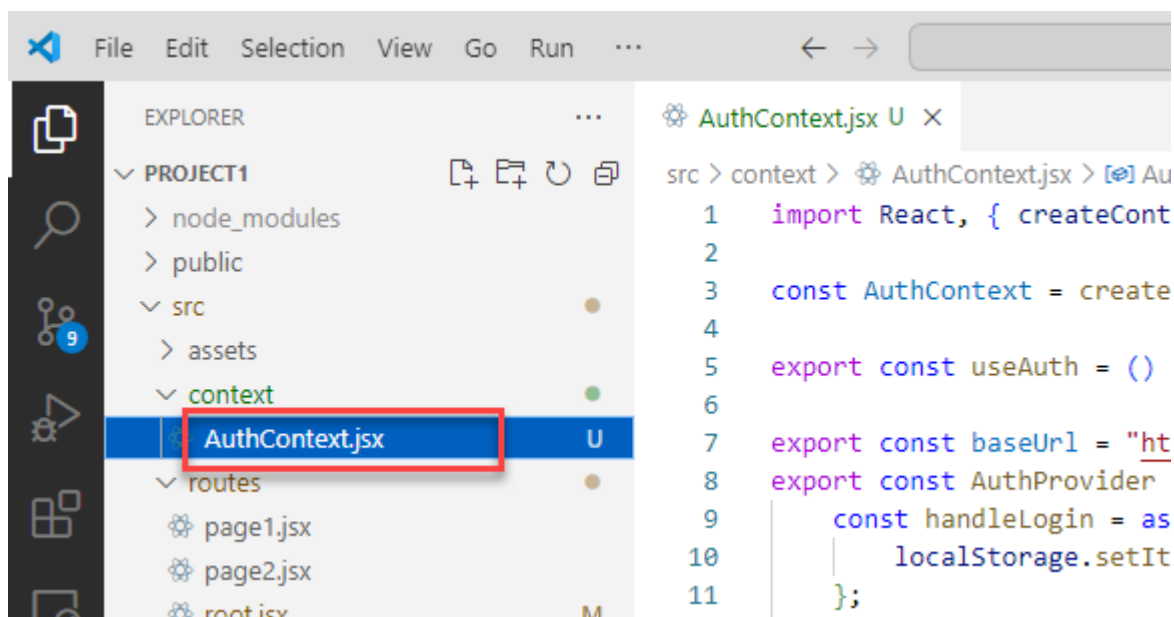

We need MUI Lab for using Loading Button. Install with this command:

npm install @mui/lab

Create "**context**" folder inside "**src**" folder

Create **AuthContext.jsx** inside "context" folder

Open and put this code in `src/context/AuthContext.jsx`:

```
import React, { createContext, useContext } from "react";

const AuthContext = createContext();

export const useAuth = () => useContext(AuthContext);

export const baseUrl = "https://learning2.pt-mine.id";
export const AuthProvider = ({ children }) => {
  const handleLogin = async (res) => {
    localStorage.setItem("appuser", JSON.stringify(res));
  };

  const handleLogout = () => {
    localStorage.removeItem("appuser");
    window.location.href = "/login";
  };

  const checkLogin = () => {
    try {
      const token = localStorage.getItem("appuser");
      if (token !== null) {
        const appuser = JSON.parse(token);
        return appuser.email;
      } else {
        return false;
      }
    } catch (error) {
      return false;
    }
  };

  return (
    <AuthContext.Provider value={{ checkLogin, handleLogin, handleLogout }}>
      {children}
    </AuthContext.Provider>
  );
};

export const getToken = async () => {
  try {
    const token = localStorage.getItem("appuser");
    if (token !== null) {
      const appuser = JSON.parse(token);
      const bearerToken = "Bearer " + appuser.token;
      return bearerToken;
    } else {
      return null;
    }
  } catch (error) {
    return null;
  }
};
```

Create **ProtectedRoute.jsx** inside "**src**" folder.

This file is use to block request if not signed in

Open and put this code **in src/ProtectedRoute.jsx**:

```
import { Navigate } from "react-router-dom";
import { useAuth } from "../context/AuthContext";

export const ProtectedRoute = ({ children }) => {
  const { checkLogin } = useAuth();

  const email = checkLogin();

  if (!email) {
    return <Navigate to="/login" />;
  } else {
    return children;
  }
};
```

We will move **main.jsx** to **App.jsx** to make our code become organized.

Open and replace **src/main.jsx** with this code:

```
import * as React from "react";
import * as ReactDOM from "react-dom/client";
import App from "../App";

ReactDOM.createRoot(document.getElementById("root")).render(
  <React.StrictMode>
    <App />
  </React.StrictMode>
);
```

Open and replace **src/App.jsx** with this code:

```
import * as React from "react";

import { createBrowserRouter, RouterProvider } from "react-router-dom";
import "./index.css";
import Root from "./routes/root";
import Page1 from "./routes/page1";
import Page2 from "./routes/page2";
import Login from "./Login";
import { AuthProvider } from "./context/AuthContext";
import { ProtectedRoute } from "./ProtectedRoute";

const router = createBrowserRouter([
  {
    path: "/",
    element: (
      <ProtectedRoute>
        <Root />
      </ProtectedRoute>
    ),
    children: [
      {
        path: "page-one",
        element: <Page1 />,
      },
      {
        path: "page-two",
        element: <Page2 />,
      },
    ],
  },
  {
    path: "login",
    element: <Login />,
  },
]);

export default function App() {
  return (
    <AuthProvider>
      <RouterProvider router={router} />
    </AuthProvider>
  );
}
```

```
1 import * as React from "react";
2 import { createBrowserRouter, RouterProvider } from "react-router-dom";
3 import "./index.css";
4 import Root from "./routes/root";
5 import Page1 from "./routes/page1";
6 import Page2 from "./routes/page2";
7 import Login from "./Login";
8 import { AuthProvider } from "./context/AuthContext";
9 import { ProtectedRoute } from "./ProtectedRoute";
10
11 const router = createBrowserRouter([
12   {
13     path: "/",
14     element: (
15       <ProtectedRoute>
16         <Root />
17       </ProtectedRoute>
18     ),
19     children: [
20       {
```

This route "/" is protected

Open and replace **src/Login.jsx** with this code:

```
import { useState } from "react";

import { baseUrl, useAuth } from "../context/AuthContext";
import { useNavigate } from "react-router-dom";
import axios from "axios";
import CssBaseline from "@mui/material/CssBaseline";
import TextField from "@mui/material/TextField";
import Paper from "@mui/material/Paper";
import Box from "@mui/material/Box";
import Grid from "@mui/material/Grid";
import Typography from "@mui/material/Typography";
import LoadingButton from "@mui/lab/LoadingButton";
import { createTheme, ThemeProvider } from "@mui/material/styles";
const defaultTheme = createTheme();

export default function Login() {
  const [loading, setLoading] = useState(false);
  const { handleLogin } = useAuth();
  const navigate = useNavigate();

  const handleSubmit = async (event) => {
    event.preventDefault();
    const data = new FormData(event.currentTarget);

    setLoading(true);
    try {
      const formData = new FormData();
      formData.append("useremail", data.get("email"));
      formData.append("userpassword", data.get("password"));
      const response = await axios.post(`${baseUrl}/login`, formData, {
        headers: {
          "Content-Type": "multipart/form-data",
        },
      });

      if (response.data.result) {
        handleLogin(response.data.userData);
        navigate("/page-one");
      } else {
        alert(response.data.message);
      }
    } catch (error) {
      console.error("Error sending data: ", error);
      alert("An error occurred. Please try again later.");
    } finally {
      setLoading(false);
    }
  };

  return (
    <ThemeProvider theme={defaultTheme}>
      <Grid container component="main" sx={{ height: "100vh" }}>
        <CssBaseline />
        <Grid
```

```

      item
      xs={false}
      sm={4}
      md={7}
      sx={{
        backgroundImage:
          "url(https://source.unsplash.com/random?wallpapers)",
        backgroundRepeat: "no-repeat",
        backgroundColor: (t) =>
          t.palette.mode === "light"
            ? t.palette.grey[50]
            : t.palette.grey[900],
        backgroundSize: "cover",
        backgroundPosition: "center",
      }}
    />
    <Grid
      item
      xs={12}
      sm={8}
      md={5}
      component={Paper}
      elevation={6}
      square
    >
      <Box
        sx={{
          my: 8,
          mx: 4,
          display: "flex",
          flexDirection: "column",
          alignItems: "center",
        }}
      >
        </img>
        <Typography component="h1" variant="h5">
          Sign in
        </Typography>
        <Box
          component="form"
          onSubmit={handleSubmit}
          noValidate
          sx={{ mt: 1 }}
        >
          <TextField
            margin="normal"
            required
            fullWidth
            id="email"
            label="Email Address"
            name="email"
            autoComplete="email"
            autoFocus
          />

```

```

        <TextField
          margin="normal"
          required
          fullWidth
          name="password"
          label="Password"
          type="password"
          id="password"
          autoComplete="current-password"
        />

        <LoadingButton
          loading={loading}
          type="submit"
          fullWidth
          variant="contained"
          sx={{ mt: 3, mb: 2 }}
        >
          Sign In
        </LoadingButton>
      </Box>
    </Box>
  </Grid>
</Grid>
</ThemeProvider>
);
}

```

Open and replace **src/routes/root.jsx** with this code:

```

import { Outlet, Link } from "react-router-dom";

import Button from "@mui/material/Button";
import { useAuth } from "../../context/AuthContext";

export default function Root() {
  const { handleLogout } = useAuth();

  const logout = () => {
    handleLogout();
  };

  return (
    <>
      <div id="sidebar">
        <h1>React Router Example</h1>
        <div>Our title</div>
        <nav>
          <ul>
            <li>
              <Link to={` /page-one`} >Go to Page 1</Link>
            </li>
            <li>
              <Link to={` /page-two`} >Go to Page 2</Link>
            </li>
            <li>

```

```

        <Button onClick={logout}>Log Out</Button>
      </li>
    </ul>
  </nav>
</div>
<div id="detail">
  <Outlet />
</div>
</>
);
}

```

Run this project :

npm run dev
