

Introducing React JS to Create Web Apps

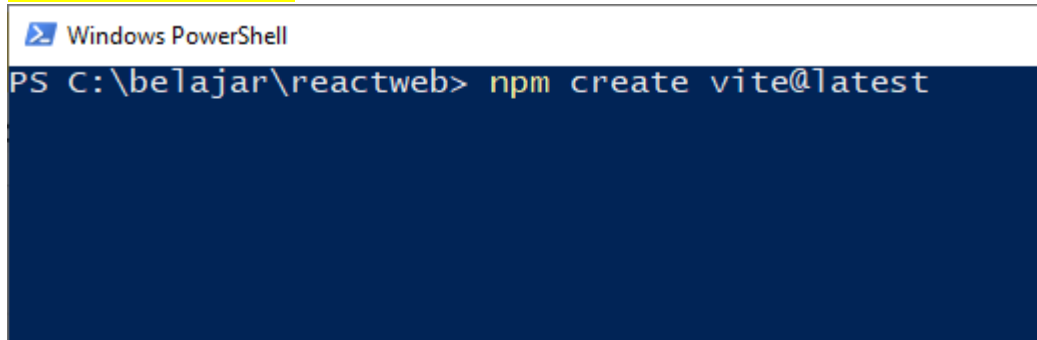

Create new folder (for project folder) in your preferred location.

Hold Shift + Right click inside created folder. And select Open PowerShell window here

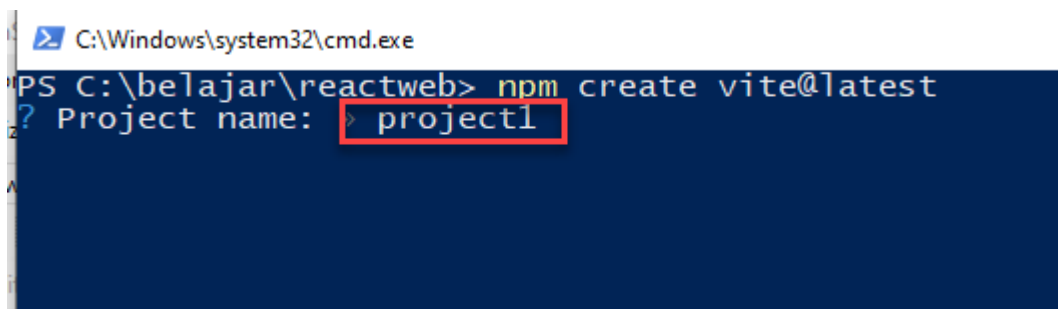

Type this command to create template code:

npm create vite@latest

Type project/folder name:

project1

Select **React**

C:\Windows\system32\cmd.exe

```
PS C:\belajar\reactweb> npm create vite@latest
✓ Project name: ... project1
? Select a framework: » - Use arrow-keys. Return to screen on cancel
  Vanilla
  Vue
  React
  Lit
  Svelte
  Solid
  Qwik
  Others
```

Select **Javascript**

C:\Windows\system32\cmd.exe

```
PS C:\belajar\reactweb> npm create vite@latest
✓ Project name: ... project1
✓ Select a framework: » React
? Select a variant: » - Use arrow-keys. Return to screen on cancel
  TypeScript
  TypeScript + SWC
  JavaScript
  JavaScript + SWC
  Remix
```

Result

Windows PowerShell

```
PS C:\belajar\reactweb> npm create vite@latest
✓ Project name: ... project1
✓ Select a framework: » React
✓ Select a variant: » JavaScript

Scaffolding project in C:\belajar\reactweb\project1...

Done. Now run:

  cd project1
  npm install
  npm run dev

PS C:\belajar\reactweb>
```

Open project folder with VS Code, open terminal

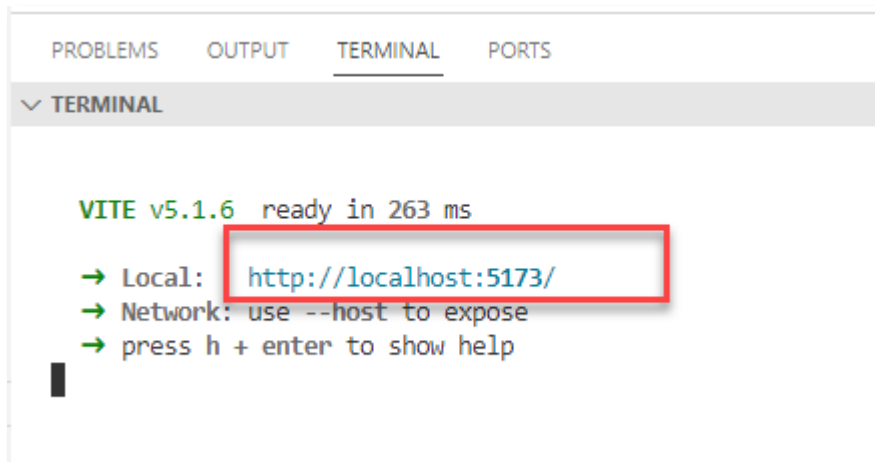

Run:

npm install

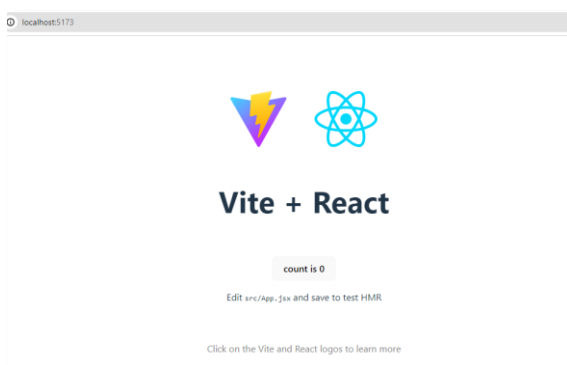

```
PROBLEMS OUTPUT TERMINAL PORTS
▼ TERMINAL
PS C:\belajar\reactweb\project1> npm install
```

Press **CTRL + Click** on [http://localhost:xxxx](http://localhost:5173/)

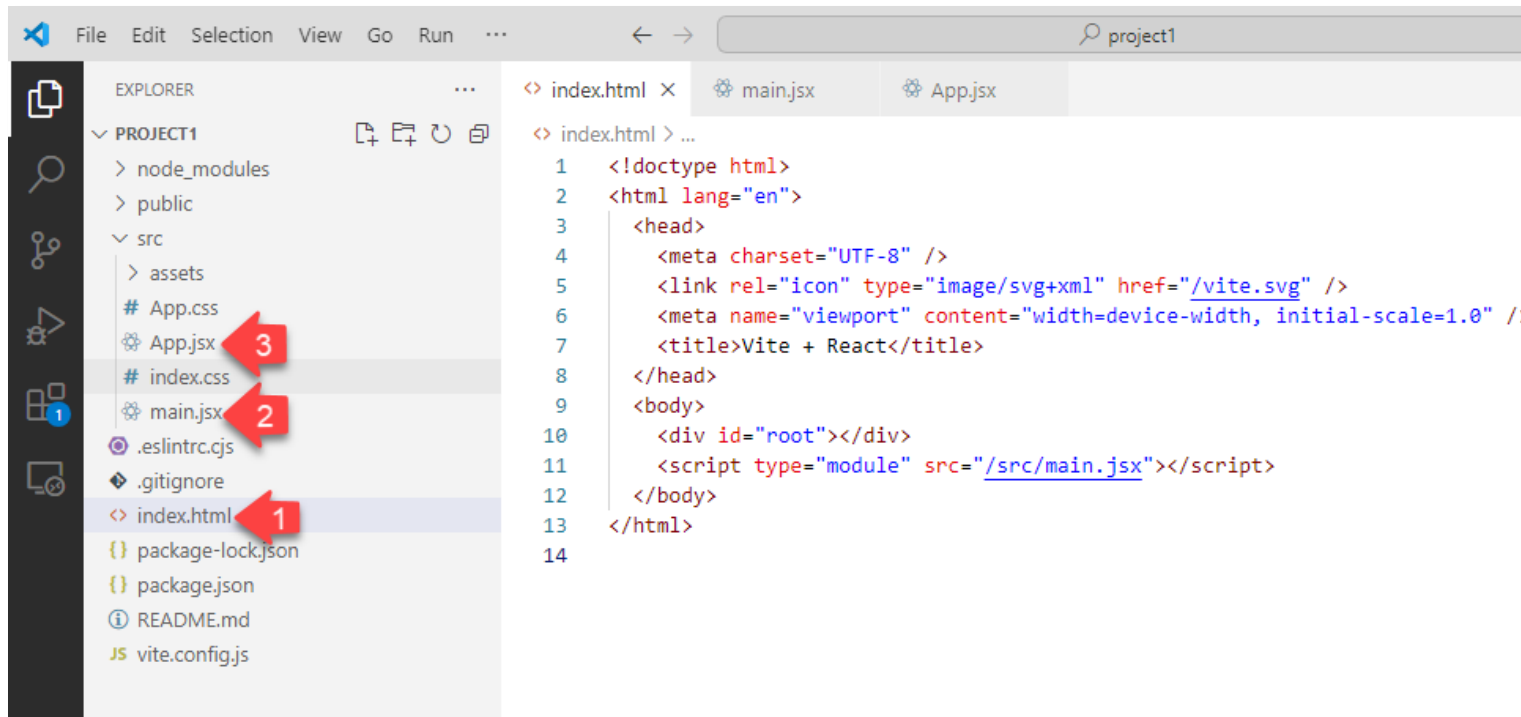

```
PROBLEMS OUTPUT TERMINAL PORTS
▼ TERMINAL
VITE v5.1.6 ready in 263 ms
→ Local: http://localhost:5173/
→ Network: use --host to expose
→ press h + enter to show help
```

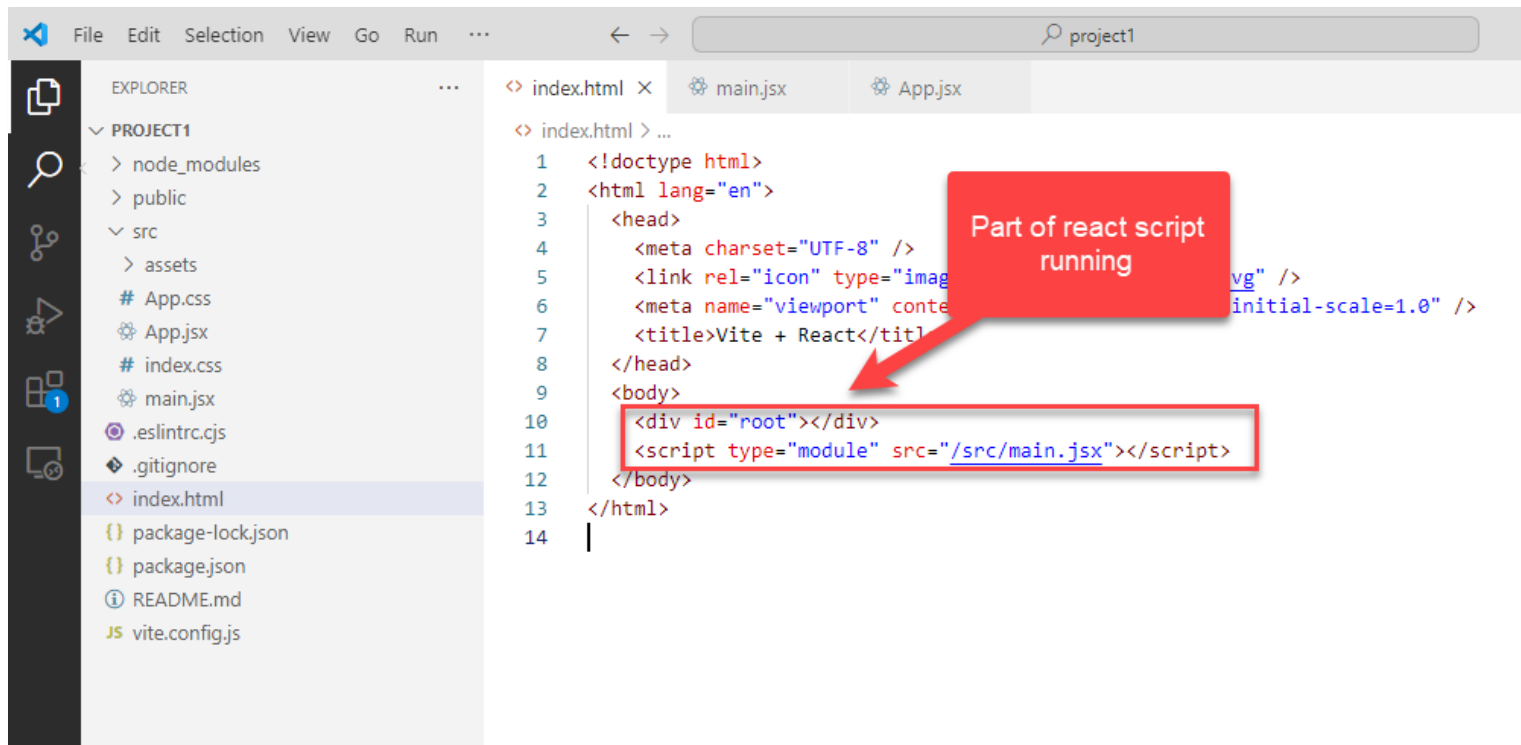

You will see this html page

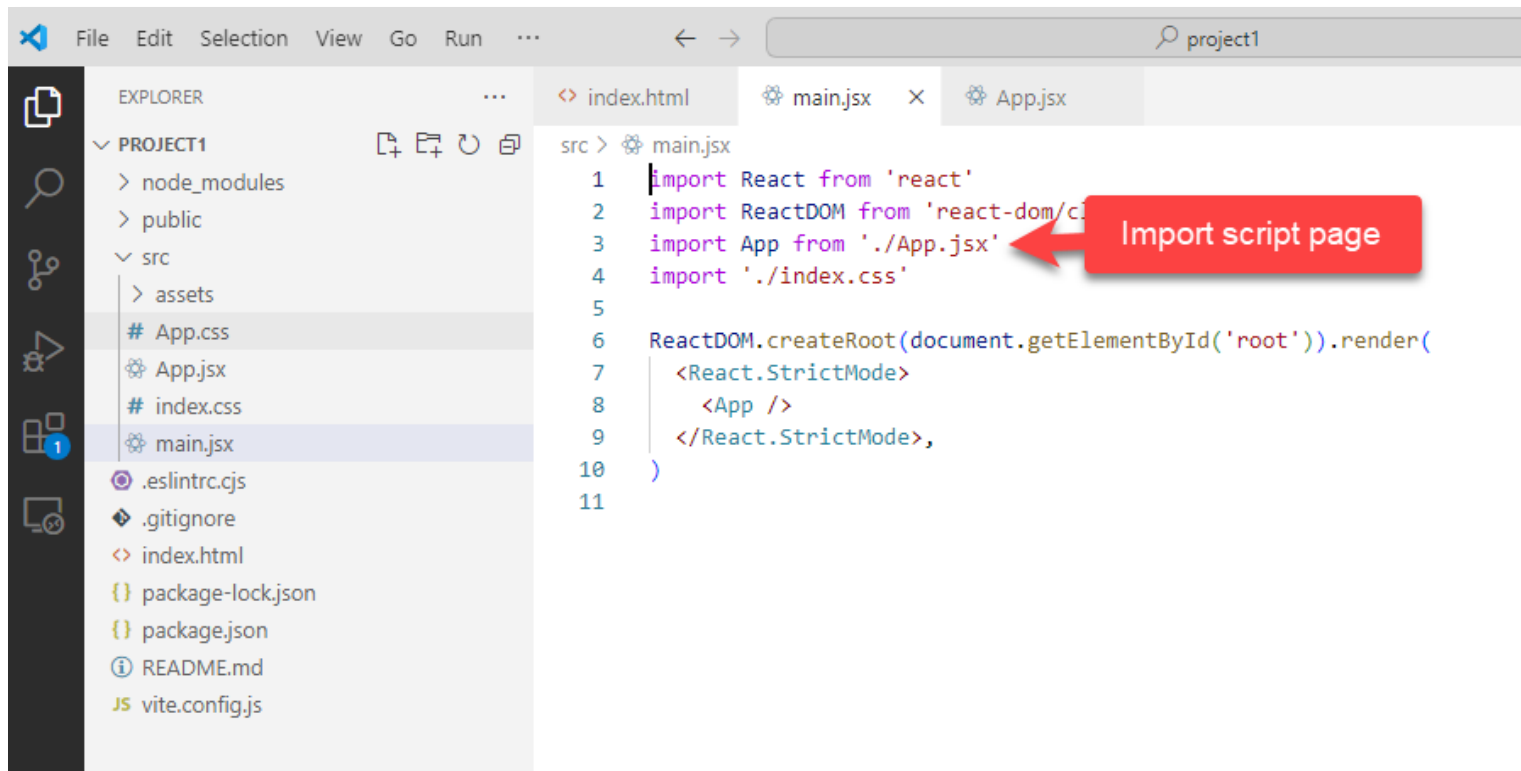

Source Code routing file structure

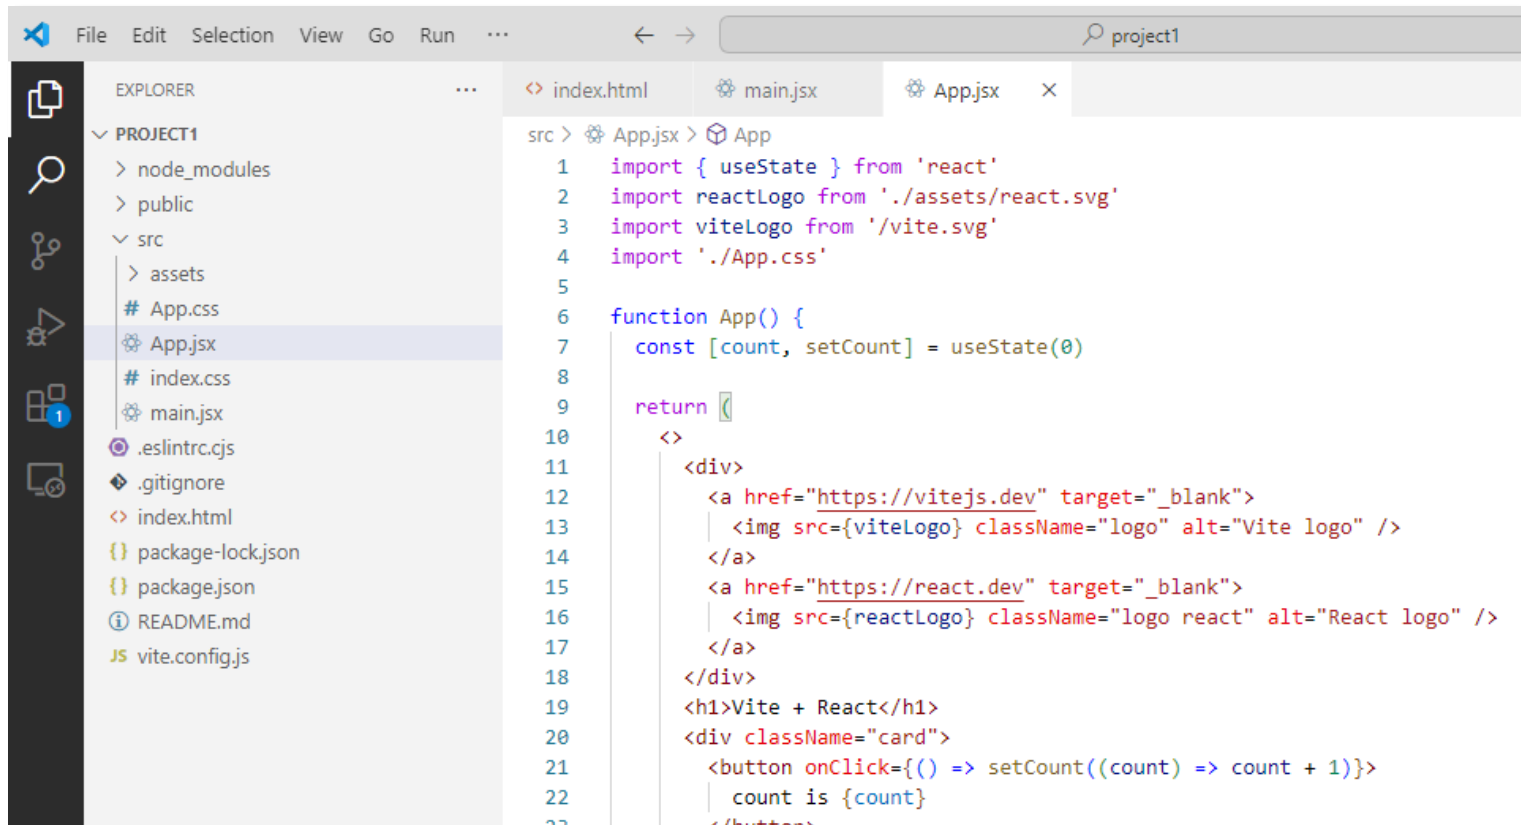

Index.html

Main.jsx

App.jsx (showing page)

Web Apps using HTML to render page.
